

SAVE MORE WITH SMART THERMOSTATS

Conventional thermostats no longer do the trick.

Basic (non-programmable) and standard programmable thermostats provide limited functionality—often resulting in wasted energy used to heat or cool unoccupied spaces. **The solution? Upgrade to a Wi-Fi or smart thermostat and take control of your energy use with remote, around-the-clock access to adjust settings and programs.**

Which thermostat is right for you?

Standard programmable thermostats

- Customizable daily temperature schedule
- Different schedules for weekdays vs. weekends
- Set up manually by pressing buttons on the device
- **\$25 REBATE AVAILABLE**

Wi-Fi enabled thermostats

- Connect to the Internet / Wi-Fi in your home
- Program the device through a website or app via smartphone, tablet, or computer
- Remotely control your home's temperature 24/7
- **\$100 REBATE AVAILABLE**

Smart thermostats

- Remotely adjust temperature via any device connected to the Internet
- Program themselves as they “learn” your behavior patterns and desired temperatures
- Utilize occupancy-sensing technology, motion sensors, and/or GPS geofencing technology
- **\$100 REBATE AVAILABLE**

Take control of your energy use

- Research the options before purchasing a new thermostat
- Not all Wi-Fi thermostats are *smart* thermostats
- Only true *smart* thermostats sense when you are actually home and program themselves
