

**Date:** January 10, 2025  
**To:** Operating Record  
**From:** Lori Myott, Manager, Environmental Services and Reliability Compliance Department  
**RE:** 2024 Annual CCR Fugitive Dust Control Report  
Erickson Station

---

This report serves as the Annual Coal Combustion Residuals Fugitive Dust Control Report prepared in accordance with 40 CFR Part 257.80(c). It outlines measures implemented at the Lansing Board of Water & Light's Erickson Power Station Ash Impoundment System to minimize fugitive dust emissions from coal combustion residuals (CCR). Erickson Power Station is located at 3725 South Canal Road, Lansing, Michigan and was a 165-megawatt coal fired electric generating power plant.

The plant was permanently shut down on November 27, 2022 and ash is no longer being generated.

#### **Fugitive Dust Control Activities**

Removal of CCR from the Ash Impoundment system was completed in 2024. During ash removal activities, ash remained saturated with water with no potential to become fugitive dust.

The Millet Fly Ash Facility baghouses have been removed from the facility's Renewable Operating Permit and are no longer in operation. Removal of fly ash from the Millet Ash Storage Building occurred July through September 2024 and fugitive dust was mitigated using water spray as necessary and covered trucks.

The plant roadways are actively maintained and watered by the BWL as needed and the 15-mph speed limit is observed. Since the Erickson Power Station plant closure, they are rarely traveled (for routine inspections). Access to the site is controlled and public access is restricted.

#### **Citizen Complaints**

There were no citizen complaints of CCR fugitive dust at Erickson Station received during this reporting period, January 1, 2024 to December 31, 2024.

#### **Corrective Actions**

There were no specific corrective actions taken during this reporting period, January 1, 2024 to December 31, 2024.
