

Spring is right around the corner, and that also means mating season for our resident peregrine falcons, April and Tornado! Since 2004, the BWL has seen over 50 eggs laid inside the nesting box for the endangered peregrine falcon which sits atop the Eckert Power Station. Catch a live look inside the nest 24-7 at [lbwl.com/falcon.aspx](http://lbwl.com/falcon.aspx).

## Compressed Air Leaks Put the Pressure on Energy Bills

ENERGY STAR® says, "Leaks are a significant source of wasted energy in a compressed air system, often wasting as much as 20-30 percent of the compressor's output. Compressed air leaks can also contribute to problems with system operations, including:

- Fluctuating system pressure, which can cause air tools and other air-operated equipment to function less efficiently, possibly affecting production.
- Excess compressor capacity, resulting in higher than necessary costs.
- Decreased service life and increased maintenance of supply equipment (including the compressor package) due to unnecessary cycling and increased run time.

Keep your compressed air systems properly maintained and upgrade to energy-efficient materials to keep utility bills low. Rebates are available for eligible items such as:

- Compressed air energy audits and leak reduction
- Engineered nozzles
- Flow controllers
- Mass air dryers
- VSD air compressors
